## Well User Agreement of Non-Use or Connection to the Public Water Supply

In accordance with West Vernon Parish Waterworks District's Cross Connection Control Program and LA State Law, a private well or auxiliary water source may not be connected in any manner to the public water supply unless proper protection against cross connection is provided. Only a Reduced Pressure Backflow Preventer or an approved Air Gap (complete separation from public water supply) may be used for protection. These devices must have prior approval by West Vernon Parish Waterworks District and be properly installed at the customer's expense. Prior to using the public water supply the device must be installed in accordance with Louisiana state regulations and initial testing of device completed by West Vernon Parish Waterworks District. In addition to initial testing of the Reduced Pressure Backflow Preventer, annual testing and reporting of device to the District is required in a timely manner. Anyone not in compliance with this rule are subject to have their water service discontinued.

Check appropriate box:

- This serves as notification that a private water well **IS** located on the property at the following address:

I (we) understand and agree that this private water supply is and shall remain totally segregated from the public water supply, and no unapproved or unauthorized cross connection, auxiliary intakes, bypasses, or interconnections with any type of irrigation system or otherwise will be permitted without the proper cross connection control device and approval of West Vernon Water.

I (we) further understand and agree that should an auxiliary water supply be connected to the public water supply system at the above address, maximum cross connection control equipment in the form of an air gap or reduced pressure backflow prevention device shall be installed in accordance with state regulations to protect the public water supply.
